PROFILE SUMMARY

Dedicated, proactive and committed full stack engineer, graphic designer and business management professional whose extensive record includes, establishing and maintaining workings of both new and existing businesses, designing products and marketing materials for print and web applications, creating user friendly websites, and successful sales of high value artwork. Effective communicator with the ability to work with customers and co-workers at all levels. Recently completed two seperate Full Stack Web Development courses with an average A grade in all assignments through the University of Utah

CURRENT PROJECTS

Mountain Trails Gallery Website (in progress)

<http://mtgalleries-backend.herokuapp.com>

This is a website for Mountain Trails Gallery. This is a full stack website with both a front-end created using React and an administrative backend using Node, Express, Mysql and Amazon AWS. This is a solo project that will be used as a homebase for the gallery's online presence as well as for some inventory management. I currently have the back-end coded and will be working on the React client side in the future.

Athletes and Activism

<http://athletes-and-activism.herokuapp.com>

This web app has been developed by a group I'm part of. It's purpose is to display the charities and causes supported by professional athletes. It also uses React for the front end and a Node, Express, MongoDB backend and database.. My responsibilities have been setting up initial routing and backend functionality as well as some work with the react-bootstrap framework for the front-end. I am also integrating a User Login UI and profile page.

Smaller Projects - Github

<http://github.com/jduncan9720>

Over 50 repos of various projects and apps created over the past year.
